Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 8, 2004 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Julia A. Glazer on November 29, 2004.

3. The application has been amended as follows:

Claims 12-20 have been cancelled without prejudice to their continued prosecution in a continuation application.

STATEMENT OF REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance:

The most pertinent prior art known to the Examiner is listed on the forms PTO-892 and 1449. The claims in their present amended forms have overcome the prior art of record because none of them teaches, discloses or suggests a laundry detergent product comprising cyclodextrin granules formed from a mixture of cyclodextrin powder as those recited, aluminosilicate or zeolite, and an aqueous medium, having the recited particle size, and a laundry detergent composition including a surfactant, a builder and an enzyme. Trinh, the closest prior art of record, teaches in Example 7 the preparation of detergent-compatible softener particles wherein uncomplexed, ground cyclodextrin and calcium bentonite clay is added to a mixture of fabric softening agents, coated and resized through 11 on 26 mesh U.S. Standard screens (0.6-1.7 mm or 600 to 1700 microns), for blending into detergent granules which comprises surfactants, builders and enzymes (see col. 16. line 37 to col. 18, line 9). Trinh, however, fails to disclose softener particles comprising uncomplexed cyclodextrin, aluminosilicate ion exchange material as that recited or zeolite, and an aqueous medium, and fails to disclose the recited odor loading factor. Inasmuch as there is no motivation, direction or guidance in substituting the bentonite clay, which is a fabric softening agent, with aluminosilicate or zeolite, which is a known builder, the present claims are found to be allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
